SUMMARY

Frontend Software Engineer with 3 years of experience building scalable enterprise web applications using React.js, TypeScript, Redux Toolkit and Material UI. Experienced in developing reusable React components, implementing feature-based modular architecture, integrating REST APIs, optimizing application performance through lazy loading, memoization and code splitting, and deploying applications on SAP Business Technology Platform (SAP BTP). Strong understanding of modern JavaScript (ES6+), asynchronous programming, responsive UI development, and clean software engineering principles. Contributed to the development of an enterprise Model Context Protocol (MCP) server using FastMCP to expose business rule tools for LLM integration.

EXPERIENCE

Incture Technologies
Software Engineer

Sep 2023 – Present
Bengaluru, India

- Developed and maintained enterprise web applications using **React.js, TypeScript, Material UI and Vite**, delivering scalable, responsive and maintainable user interfaces.
- Designed reusable React components, custom hooks and feature-based modules following modular architecture, improving code reuse and maintainability across enterprise applications.
- Implemented state management using **Redux Toolkit** and React Query with REST API integration, authentication, robust error handling and optimized client-side data fetching.
- Built responsive, cross-browser compatible user interfaces and improved performance through lazy loading, React.memo and code splitting.
- Integrated SAP BTP services including **SAP XSUAA** and **Destination Service**, and deployed applications using the **Multi-Target Application (MTA)** model on SAP Business Technology Platform (SAP BTP).
- Worked with **Git**, Azure DevOps CI/CD pipelines, pull requests and peer code reviews in Agile development environments.
- Contributed to the development of an enterprise **Model Context Protocol (MCP) Server** using FastMCP by implementing tools for business rule discovery, metadata retrieval and rule execution integration.

PROFESSIONAL PROJECTS

CW Intelligent Decision Management (IDM)

- Developed enterprise modules for the Intelligent Decision Management (IDM) platform, enabling users to configure and execute business decision tables through an intuitive web interface.
- Migrated the Intelligent Decision Management (IDM) frontend from **JavaScript** to **TypeScript**, improving type safety, code maintainability and developer productivity.
- Refactored the application from **IDM 2.0** to **IDM 3.0**, modernizing the frontend architecture while ensuring seamless feature migration.
- Developed reusable UI artifacts using the company's **RDS (Rajana Design System)** built on Material UI and published shared component libraries to **Azure Artifacts** for reuse across multiple enterprise applications.
- Implemented a **Microfrontend** architecture using **Vite Module Federation**, enabling independent development and deployment of frontend modules.

CW Ticket Service

- Developed a React-based enterprise ticket management application for creating, tracking and managing customer support requests.

- Implemented advanced forms, search capabilities, status management and asynchronous API integration for efficient ticket processing.
- Built scalable frontend modules using reusable components and collaborated with backend engineers to deliver new product features.

CW IDM MCP Server

- Developed a **Model Context Protocol (MCP) Server** using FastAPI and FastMCP to expose Intelligent Decision Management (IDM) capabilities as tools for AI applications.
- Designed and implemented MCP tools and prompts for business rule discovery, metadata retrieval, payload generation and rule execution.
- Exposed the MCP server as a REST-based web server using the **JSON-RPC 2.0** protocol, enabling seamless communication between AI clients and IDM services.
- Integrated the MCP server with the existing IDM platform, allowing AI applications to invoke enterprise business rules through standardized MCP interfaces.

PERSONAL PROJECTS

Vehicle Tracker

 Demo |  FE |  BE

- Designed and developed a full-stack vehicle management platform for used vehicle dealerships, enabling dealers to showcase inventory and customers to search, filter and explore available vehicles.
- Built a responsive frontend using **Next.js, TypeScript and Tailwind CSS** with reusable UI components, advanced search, filtering, dynamic routing and role-based dashboards.
- Developed RESTful backend services using **FastAPI** and integrated Supabase for authentication, authorization and secure session management.
- Implemented vehicle inventory management, customer requirement tracking, CRUD operations and scalable dealer workflows through REST API integration.
- Utilized Redux Toolkit and RTK Query for centralized state management, asynchronous data fetching and client-side caching to deliver a responsive user experience.

EDUCATION

NSS College of Engineering

Bachelor of Technology in Computer Science and Engineering

2019 – 2023

Palakkad, Kerala

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Frontend: React.js, Next.js, Redux Toolkit, React Query, React Router, Material UI, Tailwind CSS, AG Grid, Vite, Webpack, Module Federation

Backend: FastAPI, SQLAlchemy, REST APIs, JSON-RPC, Microservices

Cloud & DevOps: SAP BTP, Cloud Foundry, SAP XSUAA, Destination Service, Multi-Target Application (MTA), Azure DevOps, CI/CD, Docker, Azure Container Registry

Software Engineering: Reusable Components, Custom Hooks, Modular Architecture, Feature-Based Architecture, State Management, REST API Integration, Performance Optimization, Responsive Design, Cross-Browser Compatibility, Git, Code Reviews, Agile Scrum
